Dan/Ben,

Here's the data you requested. Please reformat the Received Local column for m/d/yyyy h:mm:ss. It doesn't look like anything was missed. Does readings every 2 seconds make sense? Is there any particular reason you thought you were missing data?

Are you guys watching Survey Controller or Deployment Manager? If you are watching Survey Controller, when no data is coming through, the circle will turn Yellow for intermittent or Red for no readings. If you are looking at Deployment Manager there is a delay. We can setup a Connection Notification (similar to an alarm notification), that will tell you no data has been received since a specific period of time (5 minutes is the lowest). If that is triggered, an email and/or text will be sent to you that it is down.

We're also setting up an automated export for a 6 am to 6 pm time frame. When that is setup is complete, we'll send you an email with login information.
